

Listing of Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Claim 1 (currently amended) A messaging system ~~for filtering messages~~ associated with coordinate way points, the system comprising:

a mobile radio service provider network;

a plurality of subscriber devices enabled to function with said mobile radio service provider network;

at least one user interface inherent to said devices for facilitating two-way communication with said network, said devices each possessing a unique identification number;

said device enabled to be set to a specific area of granularity within said provider network, wherein messages outside said area of granularity would be not be receivable to said subscriber and messages within said area of granularity would be receivable to said subscriber, wherein said messages are associated with a specific coordinate way point and are not associated with a specific subscriber within said network,

wherein said device adapted to permit operations selected consisting of capturing said device's own instant coordinate location, leaving a message associated with a specific coordinate location within said network, and accessing a message posted at a specific coordinate location within said network at least due to said user device's physical proximity to said specific coordinate location, wherein leaving a message associated with

a specific coordinate location requires said user to specify at least a location associated with said message but does not require an explicit recipient.

Claim 2 (original) The system according to claim 1 wherein said messages are stored in a database within said network.

Claim 3 (original) The system according to claim 1 wherein said devices include personal computers, cell phones, personal digital assistants, user-supported computer.

Claim 4 (original) The system according to claim 1 wherein said devices are located within said network by a positioning algorithm based on a method selected from the group consisting of triangulation of multiple signals, signal strengths of multiple signals, time difference of arrival of different signals, angle of arrival differences of different signals, GPS signals, and combinations thereof.

Claim 5 (original) The system according to claim 2 wherein said mobile radio service provider network is divided up into a two-dimensional grid of grid points, said database associating a physical location of a user device with one of said grid points.

Claim 6 (original) The system according to claim 2 wherein said mobile radio service provider network is divided up into a three-dimensional grid of grid points, said database associating a physical location of a user device with one of said grid points.

Claim 7 (previously presented) The system according to claim 1 wherein said mobile radio service provider network communicates using a protocol selected from the group consisting of CDMA, TDMA, FDMA, wide-band CDMA.

Claim 8 (canceled)
